Suzanne Glass
YOUGHIOGHENY RIVER LAKE
U.S. ARMY CORPS OF ENGINEERS
R.D. 1 BOX 17
CONFLUENCE PA 15424

Dear Suzanne Glass:

Enclosed please find:

- 10 Milk Carton Traps
- pheremone strips (little white strips in a zip-lock bag)
- insecticide strips (in individual vacuum packed envelopes)
- trap hangars
- twist ties
- directions for assembly of traps
- tally sheet(s) for recording moth catches
- a copy of the label for the insecticide strip

This should be all of the paraphenalia needed to perform your gypsy moth trapping program at your site this year.

You should keep the pheremone and insecticide strips dry and cool until it is time to use them. Use the twist-ties to hang the pheremone and insecticide strips inside the traps. Be sure to read the enclosed label for the insecticide strip and avoid excessive handling. The traps should be in place by mid-June and checked at least once during the season. When checking the traps, empty all of the contents, count the number of gypsy moths, record the date and number of moths trapped on the enclosed tally sheets, and replace the assembled trap. Traps should be retrieved in late August and a final count made.

Please return a copy of the completed tally sheet when you have finished recording the moth catches. We thank you for your continued participation in our gypsy moth monitoring program. If you have any questions, please contact me or Rod Whiteman.

Sincerely,

/s/ William R. MacFarlane

- twist ties
- directions for assembly of traps
- tally sheet(s) for recording moth catches
- a copy of the label for the insecticide strip

This should be all of the paraphenalia needed to perform your gypsy moth trapping program at your site this year.

You should keep the pheromone and insecticide strips dry and cool until it is time to use them. Use the twist-ties to hang the pheromone and insecticide strips inside the traps. Be sure to read the enclosed label for the insecticide strip and avoid excessive handling. The traps should be in place by mid-June and checked at least once during the season. When checking the traps, empty all of the contents, count the number of gypsy moths, record the date and number of moths trapped on the enclosed tally sheets, and replace the assembled trap. Traps should be retrieved in late August and a final count made.

Please return a copy of the completed tally sheet when you have finished recording the moth catches. We thank you for your continued participation in our gypsy moth monitoring program. If you have any questions, please contact me or Rod Whiteman.

WILLIAM H. HARSHA LAKE
U.S. ARMY CORPS OF ENGINEERS
2165 SLADE RD.
BATAVIA OH 45103

Dear David Zagurney:

Enclosed please find:

15 Delta Traps
directions for assembly of traps
tally sheet(s) for recording moth catches

This should be all of the paraphernalia needed to perform your gypsy moth trapping program at your site this year.

The pheromone strip has already been stapled to the trap. The inside of the traps are coated with a sticky substance that should snare any males lured into the trap. All you will need to do is assemble the traps and hang them up.

The traps should be in place by mid-June and should be removed from the field in late August, after all of the males have died. The trap can then be opened and the number of moths caught recorded on the enclosed tally sheet.

Please return a copy of the completed tally sheet when you have finished recording the moth catches. We thank you for your continued participation in our gypsy moth monitoring program. If you have any questions, please contact me or Rod Whiteman.

tally sheet(s) for recording moth catches

This should be all of the paraphernalia needed to perform your gypsy moth trapping program at your site this year.

The pheromone strip has already been stapled to the trap. The inside of the traps are coated with a sticky substance that should snare any males lured into the trap. All you will need to do is assemble the traps and hang them up.

The traps should be in place by mid-June and should be removed from the field in late August, after all of the males have died. The trap can then be opened and the number of moths caught recorded on the enclosed tally sheet.

Please return a copy of the completed tally sheet when you have finished recording the moth catches. We thank you for your continued participation in our gypsy moth monitoring program. If you have any questions, please contact me or Rod Whiteman.
